

## The Stand-up-cord

has multiple uses

- 1. Getting out of the kayak.
- 2. Mooring line.
- 3. Towline.

1. Place the wooden handle about 10 - 15 cm below the cockpit edge.

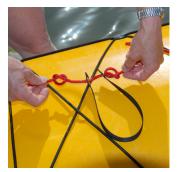

2. Tie the cord to the handle or if there is a loop at the front of the kayak.

Coil the cord twice around before tying the knot - this offloads tension.

A bowline works well.

3. The hand loop must be placed as far to the front as possible. To find the perfect setting: when your legs are pulled up you should just be able to reach your hand into the loop.

4. By moving the overhand knots you can easily place the hand loop in the desired position.

## How to use the Stand-up-cord

2. The arm and the cord should form a straight line. Move theother hand to the shore.

1. Position your legs as close to the seat as possible. Put your hand into the loop.

3. Stand up.

4. Now you can easily go ashore. The hand loop is still around you wrist so the boat is securely moored to you.
